1. Introduction

- **Problem Identified :**

- Construction site operations are managed manually using paper registers and messaging apps.

- Poor coordination, data inconsistency, and lack of real-time visibility in attendance, progress, and material usage.

- **Solution Proposed :**

- A centralized digital Construction Site Management System.

- A web-based platform to manage workforce, materials, progress tracking, and reporting efficiently.

2. Objectives

1. To store and manage construction site data including worker details, attendance records, project tasks, and material information in a centralized system.

2. To streamline material requests, approvals, and usage tracking to reduce delays and resource mismanagement.

3. To generate essential operational reports such as attendance summaries, daily progress reports, material usage, and billing records to support effective project monitoring and decision-making.

4. To track workforce attendance and daily site progress accurately using digital reporting and location-based validation.

3. Scope

1. Can be applied in small, medium, and large construction projects.
2. Can be used by site managers, contractors, engineers, and supervisors.
3. Can be deployed across multiple construction sites.
4. Can be extended for enterprise-level construction management.
5. Can be integrated with billing and compliance systems in future.

4. Feature /Functionality

Feature 1: Workforce Management
Maintains worker details, attendance records, and role assignments. Enables location-based attendance validation.

Feature 2: Daily Progress Tracking
Allows supervisors to update daily work progress with structured digital reports and updates.

Feature 3: Material Management
Tracks material requests, approvals, usage, and stock availability to prevent shortages and delays.

Feature 4: Reporting & Dashboard
Provides interactive dashboards for attendance summaries, material usage, cost tracking, and project progress.

Feature 5: Real-Time Synchronization
Instant updates across devices ensuring remote stakeholders can monitor site activity.

5. Outcome of Project

1. User can log in securely.
2. User can add and manage worker details.
3. User can mark and verify attendance digitally.
4. User can update daily site progress.
5. User can request and approve materials.
6. User can generate attendance and progress reports.
7. Admin can monitor overall project performance through dashboard.

6. Technology Stack

- **Front-End (GUI):**

1. React Native (Progressive Web App – PWA)
2. Responsive UI for web, tablet, and mobile devices

- **Back-End:**

1. MySQL / PostgreSQL (Relational Database)
2. Centralized data storage and management
3. Supabase
